About Our School Community

Stein Valley Nlakapamux School (SVNS) is a band operated school that is registered as an independent school with the Ministry of Education. The school has been in operation since 1997, and operates a K4 to grade 12 program with approximately 130 students. All of the classrooms are multi-grade with the exception of K4. The classes are split as follows: K5/grade 1, grade 2/3, grade 4/5, grade 6/7, grade 8/9, grade 9/10, grade 11/12. The school is located on the Lytton First Nation, which is within the Fraser Canyon, and is approximately 3 hours outside of Vancouver.

In September 2015, the Board of Directors developed a 5 year plan that identified 7 goals and 47 objectives. Part of the strategic plan was to transition from a 10-month calendar to a 12-month calendar. The school year is based on four semesters, which are based on the four seasons. Staff and students are in session for 10 weeks with a 2-3 week break between semesters.

Message from the Director of Education

The Accessible British Columbia Act came into effect September 1, 2022, and applies to all school districts and independent schools. This act aims to increase all persons' ability to meaningfully participate in their communities by attempting to remove barriers through the development of accessibility standards. As part of this mandate, SVNS is required to establish:

- An accessibility committee;
- An accessibility plan; and
- A tool to receive feedback on accessibility.

To make our school more accessible, we will adopt the following three key objectives in the development of our accessibility plan:

- Increase meaningful participation in our school community
- Develop standards for improved service delivery in areas including: critical infrastructure such as entranceways, playgrounds, sidewalks, transportation, and employment opportunities
- Harmonize with other jurisdictions, including federal requirements

We recognize the importance of accessibility not only for those with disabilities, but also for the benefit of the entire community. We are dedicated to advancing the efforts of the Accessibility Committee to improve equity, ease of access to services, and ease of access to our facilities. Our three-year accessibility plan presents actions that will continuously improve our learning environment to support all students, staff, and wider school community.

Respectfully.

Travis Klak,

Director of Education, Stein Valley Nlakapamux School

Definitions

Accessibility: The state of having programs, services and environments that allow all individuals to participate fully in society without encountering barriers.

Accessibility Committee: An official group formed by one or more organizations in collaboration with people with disabilities, to create an accessibility plan and feedback mechanism.

Accessibility Plan: A plan developed by an Accessibility Committee that identifies challenges and solutions for addressing accessibility barriers.

Barrier: Anything that prevents a person with a disability from fully participating in all aspects of society because of their disability. This includes physical/ environmental, attitudinal, information, communications, policy or practice, and technological barriers.

Types of barriers:

a. Physical/Environmental Barrier: A barrier resulting from building design, smells/sounds, lighting, the area adjacent to the building, shape of rooms, the size of doorways, and so on.

b. Attitudinal Barrier: A barrier that arises from the attitudes of staff, students, and the school community, including discriminatory behaviours and a lack of disability awareness.

c. Communication Barrier: A barrier that arises from difficulties receiving information in person, by telephone or online, interacting with teachers, peers, receptionists, or other staff, and receiving training.

d. Information Barrier: A barrier that arises from inadequate or incomprehensible signage, difficulties reading brochures, forms, manuals, websites, fax transmissions, equipment labels, computer screens, and so on.

e. Policy or Practice Barrier: Rules, regulations and protocols that prevent a person from performing their job satisfactorily or participating in society. Policy, practice, and procedures that prevent a student from accessing the curriculum and fully participating in the school community.

Disability: The state of being unable to participate fully and equally in society as a result of the interaction between an impairment and a barrier. (For more information about disability and types of disability and support, refer to Appendix A: Disabilities.)

Impairment: A physical, sensory, mental, intellectual, cognitive limitation, whether permanent, temporary, or episodic.

Framework Guiding Our Work

The Stein Valley Nlakapamux School accessibility plan builds on global, national, provincial, and school-specific actions to promote and support accessibility.

Global Context - United Nations

In 2006, the United Nations led efforts to adopt the Convention on the Rights of Persons with Disabilities (CRPD). In 2010, Canada ratified the CRPD and described it as follows: “The Convention on the Rights of Persons with Disabilities is an international human rights treaty aimed at protecting the rights and dignity of persons with disabilities without discrimination and on an equal basis with others. Parties to the Convention of the Rights of Persons with Disabilities are required to promote and ensure the full enjoyment of human rights of persons with disabilities including full equality under the law.”

Canadian Context in Legislation

In 1985, disability was included in the Canadian Charter of Rights and Freedoms, and in 1986, Persons with Disabilities were included in the new federal Employment Equity Act. The Accessible Canada Act (ACA) came into force in 2019, with the overarching goal of realizing a barrier-free Canada by 2040. This Act applies to federally regulated entities. The ACA has seven focus areas, and was developed based on the following guiding principles:

1. All persons must be treated with dignity regardless of their disabilities.
2. All persons must have the same opportunity to make for themselves the lives that they are able and wish to have regardless of their disabilities.
3. All persons must have barrier-free access to full and equal participation in society, regardless of their disabilities.
4. All persons must have meaningful options and be free to make their own choices, with support if they desire, regardless of their disabilities.
5. Laws, policies, programs, services, and structures must take into account the disabilities of persons, the different ways that persons interact with their environments, and the multiple and intersecting forms of marginalization and discrimination faced by persons.
6. People with disabilities must be involved in the development and design of laws, policies, programs, services, and structures.
7. The development and revision of accessibility standards and the making of regulations must be done with the objective of achieving the highest level of accessibility for people with disabilities.

BC Context and Legislation - Accessible BC Act

The Accessible British Columbia Regulation, under the Accessible British Columbia Act, came into force on September 1st, 2022. These regulations identify schools as prescribed organizations and require school districts and independent schools to have an accessibility committee, an accessibility plan, and a tool to receive feedback on accessibility by September 1st, 2023. The goal of the Act is to improve opportunities for people with disabilities and involve them in identifying, removing, and preventing barriers to their full participation in the province.

Principles in the Accessible BC Act

The Accessible BC Act includes a list of principles that must be considered as organizations develop an accessibility plan. The definitions are adapted from the foundational document BC Framework for Accessibility Legislation.

- **Adaptability:** Accessibility plans should reflect that disability and accessibility are evolving concepts that change as services, technology, and attitudes change.
- **Collaboration:** Promoting accessible communities is a shared responsibility and everyone has a role to play. Accessibility plans should create opportunities for organizations and communities to work together to promote access and inclusion.
- **Diversity:** Every person is unique. People with disabilities are individuals with varied backgrounds. Individual characteristics including race, gender, sexual orientation, religion, and lived experience greatly inform the experiences of individuals. Accessibility plans should acknowledge the principles of intersectionality and diversity within the disability community.
- **Inclusion:** All British Columbians, including persons with disabilities, should be able to participate fully and equally in their communities.
- **Self-determination:** Accessibility plans should seek to empower people with disabilities to make their own choices and pursue the lives they wish to live.
- **Universal Design:** The Centre for Excellence in Universal Design defines universal design as “the design and composition of an environment so that it can be accessed, understood, and used to the greatest extent possible by all people regardless of their age, size, ability or disability.” An accessibility plan should be designed to meet the needs of all people who interact with the organization

Our Commitment to Accessibility

Accessibility refers to the degree of ease with which people with disabilities can use and enjoy something such as a device, service, or place. Stein Valley Nlakapamux School is committed to providing an environment that is accessible and practical for the diverse community we serve. We recognize the importance of conscious planning, design, and effort in ensuring that barriers are removed, and accessibility is increased.

Our school is committed to working collaboratively to provide equitable treatment to people with disabilities in a way that respects their dignity.

To achieve this goal, we have outlined the following commitments:

- Engage with staff, community members and people with disabilities in the development and review of its accessibility plan.
- Enhance the accessibility of information and communication for all individuals, including those with disabilities.
- Determine, prioritize, and provide suggestions and actionable items to improve the accessibility of the physical and architectural environment for all individuals, including those with disabilities.
- Continually improve accessibility for people with disabilities in our school.

Our Approach

Our school believes that all members of our community have the right to be treated with dignity, given an opportunity to participate, and provided with access to learning and community. Our approach is grounded in the core provincial principles of accessibility, including adaptability, collaboration, diversity, inclusion, self-determination, and universal design. Our approach is designed to recognize the gaps and opportunities to improve accessibility for the communities we serve. By engaging in thoughtful planning, meaningful engagement, training, and direct action, we aim to deliver lasting accessibility improvements for all members of our school community.

About Our Committee

Purpose of the Accessibility Committee

Under the Accessible BC Act, organizations must establish an Accessibility Committee to assist with identifying and preventing barriers to individuals in or interacting with the organization. The purpose of the Accessibility Committee is to work collaboratively to assess and improve community accessibility, focusing on the experiences of individuals with disabilities while encompassing the whole community. The Accessibility Committee also advises district leadership on strategies to reduce social, physical, sensory, and other barriers that prevent people from fully participating in all aspects of school community life.

Recruitment of the Accessibility Committee Members

Under the Accessible BC Act, the selection of accessibility committee members must, to the extent possible, align with the following goals:

- At least half the members are persons with disabilities (PWD), or individuals who support or are from organizations that support PWDs;
- At least one member is an Indigenous person; and
- Members reflect the diversity of persons in BC.

The Accessibility Committee was formally constituted in September 2024. Current members of the Accessibility Coordinating Committee are listed below, and membership will be reviewed on a regular basis.

Accessibility Committee Membership

We would like to thank the following committee members for their time and commitment to accessibility and inclusion.

- Abby Johnny, Inclusive Education Teacher
- Vicky Raphael, Adult Education Coordinator
- Merle Hubbard, Principal
- Travis Klak, Director of Education

Overview of the Plan

Stein Valley Nlakapamux School is committed to working towards ensuring that all staff, students, families, and those that interact with the district have equitable access and reduced barriers. Our goal is to ensure that all members of our community are respected, have the opportunity for meaningful participation, and have equitable access to learning. The priority areas highlight our commitment to ensuring alignment with the principles of the Accessible BC Act (inclusion, adaptability, diversity, collaboration, self-determination, and universal design). We want to work to ensure that everyone can fully participate in and benefit from our programs, services, and facilities.

The Accessibility Advisory Committee will utilize collected data to inform the top priorities to improve accessibility in the school district and will advise the Accessibility Working Group on recommended action plans and initiatives. Accessibility plan priorities may be based on the themes of Attitudinal Barriers, Information and Communication Barriers, Physical and Environmental Barriers, School Policy and Practice Barriers, and Technology Barriers.

Plan Priorities

Priority 1 – Built Environment

Physical and/or sensory barriers can make accessing facilities and resources difficult or unattainable.

#	Action
1	Signage – clear font, high contrast, Nlha.kapamuhhchEEN, braille
2	Physical Barriers – acoustic treatments where possible (tiles, carpet)
3	Classroom – accessible student/teacher desks, signage for visually impaired, height appropriate whiteboards, light switches, peg boards, carpet/noise dampening features, sound field systems.
4	Flashing fire/lock down alarm in all areas of school and outside entry doors
5	Wide halls/walkways, mirrors in blind spots
6	Offices that are accessible and welcoming – desk height, lighting, set-up where student can make eye contact
7	All doors – adjust arm opener for easy access (children, wheelchair user, Elders, people with carts, etc.)
8	Washrooms – touchless faucets and paper towel dispensers
9	Playgrounds – accessible to all (visually impaired, various physical disabilities, cognitive disabilities)
10	Rick Hansen Accessibility Audit
11	Noise dampening in the gym to accommodate people with hearing sensitivities

Priority 2 – Attitudes

Attitudinal barriers to accessibility occur when people think, and act based on false assumptions.

#	Action
1	Review inclusive policies with respect to how they relate to identified barriers and the language used
2	Accountability: <ul style="list-style-type: none"> - Identify ways attitudes are evaluated/measured - Training that addresses lived real barriers
3	Individual Education Plans – clear accessibility plan for attitudes
4	Training – systemic stereotypes and stigmas. Inclusive lens to be embedded in curriculum
5	Review of inclusive policies
6	Understanding that all behavior is a form of communication
7	Mentorship <ul style="list-style-type: none"> - Learn as a team - Hold each other up and accountable
8	Language used to describe difference/barriers (e.g. hearing difference vs. hearing impaired)

Priority 3 – Information and Communication

People with disabilities are excluded because they use other ways to communicate.

#	Action
1	Web accessibility updates such as visual access and navigation simplicity
2	Wayfinding and signage: <ul style="list-style-type: none"> - visual signage - simple language
3	Barriers to communication of technology: <ul style="list-style-type: none"> - need to be literate - economic – internet/phone (use of varied methods of communication)

Priority 4 – Technology

When technology cannot be accessed by people with disabilities it is a barrier.

#	Action
1	Complete inventory of existing SVNS accessibility software
2	Complete inventory of existing SVNS accessibility hardware
3	Review data in points 1 and 2 and determine any gaps
4	Review of computing platforms for built in accessibility

5	Designing for inclusion training opportunity on creating accessible digital formats
6	Make SVNS website more visually accessible (eg. Large print option, colour contrast, alternative text, etc.)
7	Text to speech options for website.

How to Give Feedback

Feedback Mechanism Development

SVNS has developed an online feedback tool that includes questions about accessibility experiences that students, staff, and members of the school district community can complete. The tool is posted on the school website and an information announcement about the tool will be provided to students, staff, and parents/guardians. Feedback can be anonymous, or people can add their name and contact information if they wish to be contacted. There is also an option for people to email a video or photo(s) to administrator@svns.ca.

Report an Accessibility Barrier

We want to learn about specific barriers that people face when they are trying to access a school program, building or school information. This information can be relayed via the online feedback tool that will be posted on our school website or by email at administrator@svns.ca.

Appendices

Appendix A: About Disability

The Disability Continuum (contributed by Untapped Accessibility and BC CAISE)

There is no universally accepted meaning for the word "disability". However, the Ontario Human Rights Code provides definitions of disability that form our guiding principles. Definitions of disability can be placed on a continuum. At one end, disability is explained in terms of medical conditions (medical model). At the opposite end, disability is explained in terms of the social and physical contexts in which it occurs (environmental model).

The medical model focuses on deficiencies, symptoms and treatments. The World Health Organization's (WHO) 1976 definition for disability, for example, is "any restriction or lack (resulting from an impairment) of ability to perform an activity in the manner or within the range considered normal for a human being." Medical model definitions promote the idea that disability is a deviation from the norm.

Many people with disabilities are troubled by definitions that regard disability as abnormal, preferring instead to portray disability as commonplace, natural, and in fact, inevitable. As people age, they experience gradual declines in visual acuity, auditory sensitivity, range of motion, bodily strength and mental powers.

Significant functional limitations affect almost half of people between the ages of 55 and 79, and over 70% of people over 80 (World Health Organization WHO report entitled "Aging and Health", 2015). Beyond middle age, disability is the norm.

The environmental model explains disability in relation to social and physical contexts. In this view, the environment, not an individual's medical condition, causes disability. For example, during an electrical blackout, a person who is completely blind can effortlessly navigate around the home, hammer nails, and, if a Braille user, read a novel. A sighted person would be unable to perform these tasks easily, if at all. In this example, the environment disables the sighted person.

The environmental model emphasizes that people with disabilities are capable individuals, and it is the barriers in the built and human environments, not their medical conditions, that create disability. Disability occurs when the world is designed only for a certain way of living, without considering the natural variation among human beings. Barriers are created by humans, and modifying how we live, the tools we use, and our understanding of the proper way to do things can eliminate or minimize design problems that cause barriers. Systematic barriers can be eliminated by modifying policies, plans, and processes. Attitudes that cause barriers can be addressed through disability awareness, respect, and positive interactions with people with disabilities.

Types of Disability and Functional Limitations

A person's disability may make it physically or cognitively challenging to perform everyday tasks such as operating a keyboard, reading a sign, differentiating colours, distinguishing sounds, climbing stairs, grasping small items, remembering words, or doing arithmetic.

There are many kinds of disabilities, including physical, sensory, hearing, mental health, developmental and learning. Disabilities can be visible or invisible.

Visual Disabilities

Visual disabilities reduce one's ability to see clearly. Very few people are totally blind. Some have limited vision such as tunnel vision, where a person has a loss of peripheral or side vision, or a lack of central vision, which means they cannot see straight ahead. Some can see the outline of objects while others can see the direction of light. Impaired vision can restrict a person's ability to read signs, locate landmarks or see hazards. In some cases, it may be difficult to tell if a person has a visual disability. Others may use a guide dog or white cane.

Here are some suggestions to help you interact with people with visual disabilities:

- Identify yourself when you approach the person and speak directly to them.
- Speak normally and clearly.
- Avoid referring to the disability or using phrases like "handicapped".
- Unless it is an emergency, only touch the person if you have been given permission.
- If you offer assistance, wait until you receive permission.
- Offer your arm (the elbow) to guide the person and walk slowly.
- Service animals are working and have to pay attention at all times. Refrain from engaging with the animal.
- If you're giving directions or verbal information, be precise and clear. For example, if you're approaching a door or an obstacle, say so.
- When entering a room, show the individual to a chair, or guide them to a comfortable location.
- Identify landmarks or other details to orient the person to the environment around them.
- Ensure you say good-bye prior to leaving the individual.
- Be patient. Things may take a little longer.

Hard of Hearing and Deafness

People who have hearing loss may be deaf or hard of hearing. Like other disabilities, hearing loss has a wide variety of degrees. People who are hard of hearing may require assistive devices when communicating. While some people may use sign language, notes or hearing aids

when communicating, others may also use email, pagers, TTY telephone service or Bell Canada Relay Service.

Here are some suggestions to help you interact with people who are deaf or hard of hearing:

- Always ask how you can help. Don't shout.
- Avoid referring to the disability or using phrases like "handicapped".
- Attract the person's attention before speaking. The best way is a gentle touch on the shoulder or gently waving your hand.
- Make sure you are in a well-lit area where the person can see your face.
- Look at and speak directly to the person. Address the person, not their interpreter.
- If necessary, ask if another method of communicating would be easier, for example a pen and paper.
- Keep your face clearly visible when speaking.
- Be clear and precise when giving directions and repeat or rephrase if necessary. Make sure you have been understood.
- Service animals are working and have to pay attention at all times. Refrain from engaging with the animal.
- Any personal (e.g., financial) matters should be discussed in a private room to avoid other people overhearing.
- Be patient. Communication for people who are deaf is different because their first language may not be English. It may be American Sign Language (ASL).
- If the person uses a hearing aid, try to speak in an area with few competing sounds.

Physical Disabilities

There are many types and degrees of physical disabilities and not all require a wheelchair. For example, people who have arthritis, heart or lung conditions, or amputations may also have difficulty moving, standing or sitting. It may be difficult to identify a person with a physical disability.

Here are some suggestions to help you interact with people with physical disabilities:

- Speak normally and directly to the person rather than someone who is with them.
- People with physical disabilities often have their own ways of doing things. Ask before you help.
- Avoid referring to the disability or using phrases like "handicapped".
- Be patient and be sure you understand their needs.
- Unless it is an emergency, refrain from touching any assistive devices, including wheelchairs.
- Provide the person with information about accessible features of the immediate environment (automatic doors, accessible washrooms, etc.).

Intellectual Disabilities

People with intellectual or developmental disabilities may have difficulty doing many things most of us take for granted. These disabilities can mildly or profoundly limit one's ability to learn. You may not be able to know that someone has one of these disabilities unless you are told.

Here are some suggestions to help you interact with people with intellectual disabilities:

- As much as possible, treat the person with an intellectual disability like anyone else. They may understand more than you think, and they will appreciate you treating them with respect.
- Don't assume what a person can or cannot do.
- Avoid referring to the disability or using phrases like "handicapped".
- Use simple words and short sentences.
- Make sure the person understands what you've said.
- If you can't understand what's being said, ask again.
- Give one piece of information at a time.
- Be polite and patient.
- Speak directly to the person, not to someone who is with the person.

Learning or Cognitive Disabilities

Learning or cognitive disabilities can result in a host of different communications difficulties for people. They can be subtle, as in having difficulty reading, or more pronounced, but they can interfere with the person's ability to receive, express or process information. You may not be able to know that someone has one of these disabilities unless you are told, or you notice the way people act, ask questions or body language.

Here are some suggestions to help you interact with people with learning disabilities:

- Patience and a willingness to find a way to communicate are your best tools.
- Recognize that some people with communication difficulties use augmentative communication systems such as Signed English and Picture Exchange System.
- When you know that someone with a learning disability needs help, ask how you can best help.
- Speak normally and clearly, and directly to the person.
- Take some time — people with some kinds of disabilities may take a little longer to understand and respond.
- Try to find ways to provide information in a way that works best for them. For example, have a paper and pen handy.
- If you're dealing with a child, be patient, encouraging and supportive.
- Avoid referring to the disability or using phrases like "handicapped".

- Be courteous and patient and the person will let you know how to best provide service in a way that works for them.

Mental Health Disabilities

People with mental health disabilities look like everyone else. You won't know that the person has a mental health disability unless you're informed of it. But if someone is experiencing difficulty in controlling their symptoms or is in a crisis, you may need to help out. Be calm and professional and let the person tell you how you can best help.

Here are some suggestions to help you interact with people with mental health disabilities:

- Treat people with a mental health disability with the same respect and consideration you have for everyone else.
- Be confident and reassuring and listen to persons with a mental health disability and their needs.
- If someone appears to be in a crisis, ask him or her to tell you the best way to help.
- Take the person with a mental health disability seriously, and work with them to meet their needs.

Speech and Language Disabilities

Some people have communication challenges. It could be the result of cerebral palsy, hearing loss, or another condition that makes it difficult to pronounce words, causes slurring or stuttering, or not being able to express oneself or understand written or spoken language. Some people who have severe difficulties may use communication boards, sign language or other assistive devices.

Here are some suggestions to help you interact with people with speech and language disabilities:

- Just because a person has one disability doesn't mean they have another. For example, if a person has difficulty speaking; make no assumption they have an intellectual disability as well.
- If you don't understand, ask the person to repeat the information.
- Avoid referring to the disability or using phrases like "handicapped".
- If you are able, ask questions that can be answered 'yes' or 'no'.
- Take some time. Be patient and polite and give the person whatever time they need to get their point across.
- Allow the individual to finish their sentences themselves without interruption.
- Patience, respect and a willingness to find a way to communicate are your best tools.

Deaf-Blind Disabilities

A person who is deafblind cannot see or hear to some extent. This results in greater difficulties in accessing information and managing daily activities. Most people who are deafblind will be accompanied by an intervener, a professional who helps with communicating. Interveners are trained in special sign language that involves touching the hands of the client in a two-hand, manual alphabet or finger spelling, and may guide and interpret for their client.

Here are some suggestions to help you interact with people who are deafblind:

- Make no assumptions about what a person can or cannot do. Some deaf-blind people have some sight or hearing, while others have neither.
- Avoid referring to the disability or using phrases like “handicapped”.
A deaf-blind person is likely to explain to you how to communicate with them or give you an assistance card or a note explaining how to communicate with them.
- Speak directly to the person, as you normally would, not to the intervener. Identify yourself to the intervener when you approach the person who is deaf-blind.
- Don't touch service animals – they are working and have to pay attention at all times.
- Unless it's an emergency, refrain from touching a deaf-blind person without permission.
